

EPAD2/CPAD2/CPAD3 Modules

Modules with CAN or RS-485 Interface

The EPAD2 and CPAD2/CPAD3 series are multichannel modules and combine analog signal conditioning and A/D converter in an extremely rugged box. EPAD2/CPAD2 support 24 bit whilst CPAD3 modules support 20 bit A/D converter per channel, synchronized sampling, channel to channel and channel to system isolation. The sampling rate is 12 samples for EPAD2/CPAD2 modules and 100 samples per second for CPAD3 modules. The target applications are

- precision measurement of slow signals in rough environments, e.g. in an engine bay of a vehicle
- distributed monitoring of slow signals in industrial plants
- high quality logging of environmental conditions
- quasi-static channel expansion of dynamic DEWETRON instruments

Key Features

- Extremely rugged
- Up to 24 bit A/D converter per channel
- Channel to channel isolation
- Channel to system isolation
- Flexible connectivity
- Flexible mounting
- High channel count by daisy-chaining

EPAD2 and CPAD2/CPAD3 series modules can be daisy-chained to achieve a high channel count even over very long distances. Data output of CPAD2/CPAD3 series is available on CAN bus while EPAD2 series has a RS485 interface.

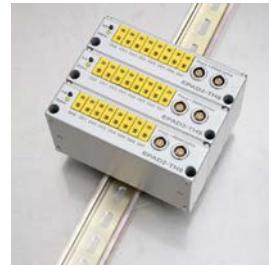

For EPAD2 series there is an interface module (EPAD2-USB) available, which connects EPAD2 modules to a USB interface.

Mounting Examples

The EPAD2 and CPAD2/CPAD3 series modules are extremely rugged and offer a wide range of mounting options.

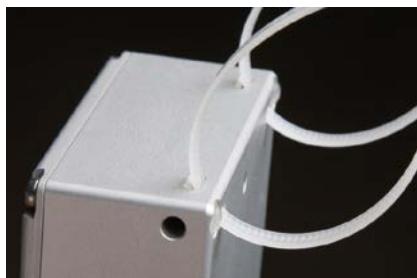

DIN rail

By ordering option XPAD-DIN-RAIL an adapter to snap EPAD2 and CPAD2/CPAD3 modules onto a DIN rail is included. A typical application for this is using EPAD2/CPAD2/CPAD3 inside 19" cabinets.

Cable strap

All modules have four trenches to provide maximum flexibility, most popular is fixing the modules by means of cable straps. A typical application for this is installing modules inside an engine bay of a vehicle.

Bolt down

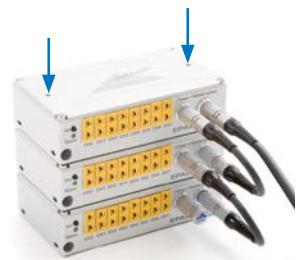

All modules offer two holes which allow bolting them down onto wooden or metal sheets. This kind of fixing modules is mainly used for quick instrumentation of single tests.

Note: No screws are provided with the modules, 2x 4.2 mm wood or sheet metal screws are required.

Stack

A unique mechanism to stack any number of modules is provided. Simply put one module on top of the other, take an adequate Allen key, press down the integrated screw and fasten it. Do the same for the 2nd screw and the two modules are locked. Making a stack is useful if more than eight channels need to be measured in a portable configuration.

CPAD3 Module Overview

- Extremely rugged
- Up to 24 bit A/D converter per channel
- Channel to channel isolation
- Channel to system isolation
- CAN interface
- Flexible mounting
- High channel count by daisy-chaining
